

Spain

Date of last revision: 1st October 2008

In the EU/EEA since	1986
Population (2008)	45,283,259
GDP PPP per capita (2007)	€24,612
Currency	Euros
Main languages	Spanish Also, Catalan, Basque, Valencian & Galician

Comprehensive health care is available to all by law. However, Dentistry, Psychiatry and Cosmetic services (for example, Plastic Surgery) are excluded. Hospital and Primary Medical care is free at the point of delivery. There is a small Public Dental Service which operates in Primary Health Care Units (Ambulatorios) managed by the regions. This only provides emergency care. Private care is freely available, however.

Number of dentists:	24,515
Population to (active) dentist ratio:	1,887
Membership of the Dental Association:	100%

Specialist care is very limited and clinical auxiliaries are limited to hygienists.

Continuing education for dentists is not mandatory, and is administered mainly by the dental association – the Consejo General de Colegios Oficiales de odontólogos y estomatólogos de España.

Government and healthcare in Spain

Spain is a democratic country with a history of centralist government supported by a regional structure. The capital is Madrid. Currently, all the regions have autonomous powers. Autonomy operates through a system of 'delegated competencies' eg health, education, police etc., and the central government retains authority for foreign policy and defence.

There are 17 Regions (*Autonomías*), and two autonomous cities, governed by elected local politicians. Some of these already have delegated 'health competencies' which largely operate through programmes which complement national laws. To manage these programmes, each region has established a health care institution, for example, the Catalan Institute of Health, Andalusian Health Service etc.

Comprehensive health care is available to all by law. However, dentistry, psychiatry and cosmetic services (for example, plastic surgery) are excluded. Hospital and primary medical care is free at the point of delivery but there is a charge for medicines unless the medicaments are provided directly. The charge varies according to the drugs prescribed but an average is 70% of the total cost. Access to elective surgery is controlled by waiting lists.

Medical staff who are employed by each regional healthcare institution *Insalud* are said to be not well-paid and usually supplement their income through private practice. When competencies are introduced, better pay and conditions for more committed hours are often negotiated and waiting lists

are usually reduced. In some regions, social security funds buy private services rather than creating public systems.

Generally, healthcare provided by the government or the regions is funded by deductions from earnings, supplemented by employers for their employees. These payments are aggregated into a national social security pool from which pensions and unemployment and sickness benefit are also funded. There is therefore an annual budget for health, although the social security fund is often in deficit, which is met from national taxation.

Individual contributions are progressive and depend on income, with an annual collective agreement which sets the national minimum wage and the minimum social security payment. This system ensures equity and applies to all citizens except government employees who have a special agency for pensions and health. The agency operates a compulsory insurance scheme which allows civil servants to choose between private or state care. The scheme for government employees includes limited dental care.

	Year	Source
% GDP spent on health	8.4% 2006	OECD
% of this spent by governm't	71.2% 2006	OECD

Oral healthcare

Almost all oral healthcare in Spain is provided by private practitioners and patients usually pay the total cost.

		Year	Source
% GDP spent on oral health	No data	2008	
% of OH expenditure private	No data	2008	

Public Healthcare

There is a small Public Dental Service which operates in Primary Health Care Units (*Ambulatorios*) managed by each regional healthcare institution. This only provides emergency care such as extractions or the prescription of antibiotics, although patients may be referred to an oral surgeon if necessary. This provision is a legal requirement. Regions which are delegated health competencies may supplement this service through specific programmes. At present, these programmes are largely confined to prevention and paediatric dentistry.

Some capitation-based 'incremental programmes' have existed since 1989. In the Basque country and Navarre the schemes have been extended for children but at present they only care for children aged 6 to 15-years-old. In 2003 a programme was introduced in Andalusia and Murcia, starting at 6-7 years and is now being implemented throughout Spain.

Private Practice

Apart from the scheme for government employees referred to earlier, which only covers examinations, extractions and prophylaxis, there are a number of private health insurance plans which include these items and X-ray diagnosis. Several companies such as *Asisa*, *Caja Salud*, *Adeslas*, *Previsaa* and *Sanitas* offer more comprehensive dental care for an additional premium. However, only 18% of the population (2007) use these private insurance schemes to cover their dental care costs.

All such schemes are personal plans, where individuals insure themselves by paying premiums directly to the insurance companies. The companies then pay fixed fees to the dentists for treatments which are covered by the companies. Private insurance companies are self-

regulating (Insurance Law and the General Insurance Office) and act as intermediaries for the dentists, who in turn bear all the financial risks of treatment. The level of the premiums depends on the procedures covered and takes no account of the risk of poor health.

Patients who subscribe to these schemes are given a 'chequebook' for each procedure covered. After treatment, the dentist submits the cheques to the company and is paid. Cheques may be used as a part payment for advanced treatments, for example crowns and bridges. The schemes are not very popular with dentists because the fees per item are very low.

Patients in Spain do not attend for dental care on a regular (periodical) basis, but tend to go when they have dental problems, only. There is no form of domiciliary (home) care.

The Quality of Care

There is no formal monitoring of the quantity or quality of dental care.

Health data

		Year	Source
DMFT at age 12	1.33	2005	OECD
DMFT zero at age 12	53%	2005	OECD
Edentulous at age 65	23%	2005	OECD

"DMFT zero at age 12" refers to the number of 12 years old children with a zero DMFT. "Edentulous at age 65" refers to the numbers of over 64s with no natural teeth

Fluoridation

Some of the main cities in Spain have artificially fluoridated water. These are Sevilla, Aljarafe, Badajoz, Murcia, Lorca, the Basque country, Girona and Linares.

The Canary Islands have naturally fluoridated water.

Education, Training and Registration

Undergraduate Training

Year of data:	2007
Number of schools	17
Student intake	2,900
Number of graduates	2,842
Percentage female	70%

To enter dental school students have first to pass a state school-leaving examination.

Dental schools are part of the universities, and not necessarily part of medical faculties. In 2008 there were 12 publicly funded dental schools, 5 private dental schools. In all the schools the course lasts 5 years.

Standards of care are not controlled in the private sector and the clinical facilities are limited. Dental schools have no health service responsibilities and students gain clinical practice within *Docente University Clinics*.

The responsibility for quality assurance of the courses in the schools is undertaken by the Ministry of Education.

Qualification and Vocational Training

The qualifications on graduation are as follows:

- ✚ *Licenciado en Odontología* (1986 onwards)
- ✚ *Médico Especialista en Estomatología* (1948 to 2001)
- ✚ and other historical categories: *Odontólogo* (1901 to 1948)

Until 2001, it was possible to train as a stomatologist, in Spain; this involved a period of dental training by qualified medical practitioners, followed by further training as a dentist.

Vocational Training (VT)

There is no post-qualification vocational training in Spain.

Registration

The law defines the specific acts a dentist may perform as: 'The treatment of diseases of the whole mouth' (law 10/86, RD 1594/1994).

To practise as a dentist a dentist must hold a degree awarded by a recognised Spanish University, or a diploma from a European Union country which is recognised by the *Ministerio de Educación y Cultura*.

There is a register of dentists held by the *Consejo General* in Madrid. The list is revised every day and there is a fee for inclusion which varies because each regional Colegio charges its own fee according to local expenses. It varies, under a liberal system between €18 and €50 monthly. An incoming dentist must register regionally.

Language requirements

Dentists from other member states of the EU are not subject to any linguistic tests.

Further Postgraduate and Specialist Training

Continuing education

An extended system of evaluation of the continuing education systems is being developed, after encouragement by the government but it is not compulsory in 2008.

The current system of continuing education is organized by the Consejo General and local *Colegios de Odontólogos y Estomatólogos*. Some companies and particular initiatives offer programmes on continuing education, of different degrees of quality and control.

Specialist Training

There is no specialist training in Spain (but see Working in Hospitals).

Workforce

Dentists

Until 1986, to be a dentist a qualification in medicine was first required – with dental training following, producing a “stomatologist”. Since then dentists could qualify with an EU recognised degree, and since 2001 no more stomatologists have been trained. In 2008 less than half the dentists practising in Spain are stomatologists.

Year of data:	2008
Total Registered	24,515
In active practice	24,000
Dentist to population ratio*	1,886
Percentage female	53%
Qualified overseas	5,400

* active dentists.

Many dentists in private practice also work part-time in other spheres.

The “dental association” believes that as numbers are growing (nearly 1,700 graduate each year) Spain has an excess of supply over need.

Movement of dentists across borders

There is also a tradition of accepting dentists trained in “third world” countries, usually South America, but the numbers entering Spain are reducing. The entry examinations for these dentists have become progressively more difficult. These dentists may not be able to work freely in other countries in the EU.

There are no figures for the movement of dentists out of Spain.

Specialists

No specialties as defined in the 1978 EU Dental Directives are formally recognised. There are a number of Stomatologists and Maxillo-Facial Surgeons who are specialists in Maxillo-facial surgery according to the EU Medical Directives.

There are an increasing number of practitioners who are limiting their practice to a given speciality, mainly orthodontics, periodontics, endodontics and oral surgery. Some Spanish universities offer postgraduate courses in different specialist areas, however they lack official professional validity.

Auxiliaries

Other than dental chairside nurses or receptionists, who are trained by dental practitioners directly, there are two main types of dental auxiliary. They are:

-  Dental hygienists
-  Dental technicians

Year of data:	2004
Hygienists	9,000
Technicians	7,500
Denturists	0
Assistants	25,000
Therapists	0
Other	0

Dental Hygienists

In Spain hygienists must hold a registerable qualification. Their education and training is provided over 2 years by private or public schools of *Formacion Profesional* and certificates of proficiency are granted by the Ministry of Education and Culture.

Hygienists are allowed to carry out prophylaxis and oral health education, but only under the prescription of a dentist who must be present in the building while they are working. The employing dentist is responsible for their work. Until 1998 there was an unknown number of non-titled dental hygienists. However, in 1996 the Government started a validation process which finished in 1998 for dental hygienists who had accredited a minimum number of years of experience in dental practices, and then passed an examination process. This has resulted in a rapid increase in the number of “recorded” hygienists (there is no registration) from 1,000 to over 9,000.

Hygienists are almost exclusively employed in private practice. The public dental service has created positions for this group, although some are employed on preventive programmes, on temporary contracts.

Dental Technicians

There is a qualification for Dental Technicians which is obtained after training and education at schools of *Formacion Profesional*, over a 2-year period. Voluntary registers are kept by the regional associations for the craft, but there is no national mandatory requirement and some regional ‘colegios’ are being established. However, in some regions it is compulsory and the numbers of such are growing.

In Spain dental technicians may only work in commercial laboratories.

Dental Assistants (Nurses)

Dental assistants work at the chairside. There is no formal training or qualification.

Practice in Spain

Year of data:	2008
General (private) practice	22,063
Public dental service	1,251
University	800
Hospital	340
Armed Forces	340
General Practice as a proportion is	92%

Many dentists in private practice also work part-time in other spheres.

Working in Private (General) Practice

Dentists who practise outside hospitals, universities or the public dental service are referred to as private practitioners. Approximately 92% of the profession work in this way and are largely in single-handed practice.

Most dentists in private practice are self-employed and earn their living through charging fees for treatments. Generally such private practitioners accept only private fee-paying patients.

Fee scales

There is no prescribed fee scale and the laws controlling free competition restrict the possibility of set fees, but regional dental associations provide recommended fees for different treatments. Local "Colegios" (regional dental organisations) set recommended fees but they cannot be enforced as mandation is against Spanish law.

Joining or establishing a practice

Newly qualified practitioners normally work as assistants and are paid a proportion (30-50%) of their gross earnings. A few of these eventually become partners but more usually they open their own practices. Although there are no workforce restrictions, there are agreed minimum conditions for a new clinic. These include sterilisation and prevention of cross infection, radiological protection, adequate waiting rooms and toilets, fire precautions and emergency lighting and insurance. Existing practices may also be purchased together with goodwill and it is acceptable to inform patients when this occurs. No state assistance is available for practice purchase, or establishing a new practice, but some banks have special agreements with the Colegios, for loans.

Premises may be rented or owned. They would usually be sited in houses or offices only.

There is no information available relating how many patients a dentist would normally look after on a regular basis.

Working in Public Clinics

A public dental service exists as described above and limited care is available to all sections of the population. Less than 5% of registered dentists work in the service but although the number employed by *Insalud* is stable, the number of those working in the regions is rising, for example in *Andalusia*. The titles used are *Odontólogo de área* and

Odontólogo de cupo. No formal postgraduate training is required for these posts but attendance for continuing education is assessed on a points basis, when evaluating applicants. As in the hospital dental service there are no grades but every third year, a dentist receives a 'Trienio' which raises his salary.

The regional authorities have introduced a capitation system for children of 6 to 14 years old. Private practitioners are eligible to accept patients from these schemes.

Patients attending the public dental service pay nothing for their care. The number of procedures undertaken is recorded for statistical purposes and complaints are investigated through a medical system. Where these are upheld a warning may be recorded on the dentists file, but he may only be prevented from practising in the service by judicial sentence following malpractice.

Working in Hospitals

Most hospitals are owned by the state, but a few have been established by the large insurance companies. In the latter private practitioners may rent facilities and charge patients on a fee per item basis. Normally however, dentists are employed as *Odontólogos* who provide routine dentistry and minor oral surgery, or medically qualified *Stomatólogos*, who supplement the work of *Odontólogos* with *Temporo-Mandibular Joint* therapy, and *Oral Medicine* or *Maxillo-Facial Surgeons*. In each case these are titles and not definitive grades.

There is no formal postgraduate training requirement for *Odontólogos* and *Stomatólogos*, but if applicants hold an oral surgery qualification they are evaluated preferentially. *Maxillo-Facial Surgeons* must have completed a formal five year training programme in an accredited hospital as set out in the EU medical Directives. No career structure exists for these appointments but pay, which is revised every three years, reflects experience. Posts are filled by national competition but autonomous regions can apply their own rules.

Working in Universities and Dental Faculties

Both full-time and part-time staff are employed and the latter also routinely work in private practice. Full-time staff may also practise outside their school when they have completed their university schedule if they have full 'dedication'. However this group can also opt for exclusive 'dedication' which denies them outside work but allows intra-mural practice.

The following grades have been established for faculty staff:-

- ✚ *Associate Professor (Profesor Asociado)*
- part-time faculty member
- ✚ *Assistant Professor (Profesor Ayudante)*
- contracted full-time and pursuing an academic career
- ✚ *Profesor Titular*
- full-time professor
- ✚ *Chairman (Catedrático)* - highest academic rank, with the same obligations and duties as a full-time professor

To be eligible for a full professorship, a faculty member must obtain a doctorate after a five year training programme in research methodology, a research project and the production of a thesis which must be defended. Professors are usually appointed to a predetermined subject by a panel of their peers after national competition. Appointees must also have had at least three years of teaching experience.

Teaching standards are not formally monitored but some universities have their own evaluation systems using student questionnaires. The quantity and quality of an

individual's research is voluntarily monitored by a National Agency for Evaluation which also awards research grants. The agency reviews publications and if a candidate passes this process, a salary increment is awarded.

Working in the Armed Forces

Many dentists serve full-time in the Armed Forces - 17% of these are females.

Professional Matters

Professional association

There is a single federal organisation, the *Consejo General de Colegios Oficiales de odontólogos y estomatólogos de España* which has a Council (*Consejo General*) of which the Presidents of each of the 19 regional *Colegios* are members.

	Number	Year	Source
Consejo General de Colegios de Odontólogos y Estomatólogos de España	24,515	2008	FDI

The membership figure represents over 90% of dentists in Spain. The central organisation has a full-time office based in Madrid. The regional organisations are best contacted through this office (see later).

Ethics and Regulation

Ethical Code

There is an ethical code that is agreed and administered by a committee of the *Consejo General*. The code covers partnership agreements, disputes with other dentists, advertising where standards have been set for signs, plaques and newspapers and confidentiality. Written consent and patient contracts are not currently included.

There are no specific contractual requirements between practitioners working in the same practice other than private contracts agreed by individual dentists. A dentist's employees however are protected by the national and European laws on maternity benefits, occupational health, the payment of social security benefits and health and safety.

Fitness to Practise/Disciplinary Matters

If a patient wishes to complain about a dentist in general practice, this may be to either the Regional *Colegio* or Municipal Consumer Offices in the Town Halls or directly to the courts. Complaints to the former are considered by a *Deontologic* committee, which has only dental members. These committees may arbitrate, issue a private or public warning, suspend a dentist or, in severe cases, refer to the courts for removal from the Register.

Dentists have a right of appeal to the *Consejo General* and patients to the legal system. All criminal acts against patients are considered by the courts.

Data Protection

There is a strict compulsory protocol of clinical data collection and storage, for patient protection and all dental offices had to be adapted to conform by 2007.

Advertising

Since 2003, there has been a *Código de publicidad* about advertising in dentistry, accepted by the Tribunal of Competence Defence, which has applicability to all dentists.

Electronic commerce is not extensively implanted among dentists but some companies of dental supplies operate in this mode. However, dentists may have their own websites under the Código and the ethical code. Spain has adopted the CED ethical code on these matters.

Indemnity Insurance

Liability insurance is compulsory for dentists and is provided by private general insurance companies. It provides cover for financial liabilities of not less than €300k, up to €600k and premiums do not vary for different types of dentists (nb. a general dental practitioner pays between €150 and €240 annually).

The premiums do cover a Spanish dentist who is working overseas.

Corporate Dentistry

Dentists are permitted to form companies, in which to practise. Non-dentists can own or be on the board of such companies.

Tooth whitening

Tooth whitening products are considered cosmetic with less than 6% carbamide peroxide. This means that the provision of tooth whitening is not limited to dentists.

Health and Safety at Work

Inoculations, such as Hepatitis B are not compulsory for the workforce, although they are recommended.

Ionising Radiation

There are many regulations relating to the facilities, dosage, sanitary controls. To direct a radiograph formal training must have been undertaken, with a licence at the end of this.

However, continuing training is not mandatory.

Hazardous waste

Since 1986 it has been mandatory to fit amalgam separators to all newly equipped premises or newly installed units. This requirement extends to putting in older units in new premises. However, there may be differences in the autonomous regions towards compliance.

Regulations for Health and Safety

For	Administered by
Ionising radiation	State Government
Electrical installations	Regional Government
Waste disposal	Regional Government
Medical devices	Regional Government
Infection control	Regional Government

Financial Matters

Retirement pensions and Healthcare

Public pensions are paid as a percentage of up to 85% of average salary, up to a maximum of €1,502 a month, and assume a minimum of 15 working years. Many supplement their public pension with private pension plans. The compulsory retirement age in Spain is 70 (65 for some professions), but it can be done on a voluntary base from 65 years onwards. Dentists may continue to work in private practice beyond normal retirement age.

For the majority of the Spanish population general health care is free, paid for out of a General State Budget - from taxation 92%, and 8% from the Social Security contributions of employers and employees. Social security payments (autónomos) for a dentist in private practice are approximately €300 a month. Many dentists will also take out private health insurance plans.

Taxes

There is a national income tax: the highest rate is 43%, which is charged on net incomes above €53,000.

VAT

No medical procedures, including laboratory prostheses attract VAT. The VAT rates are 7% on dental equipment and 16% on materials.

Various Financial Comparators
