**Data collection, esthetic evaluation and the compilation of a comprehensive treatment plan - An interactive seminar**

In this course, the diagnostic and prognostic data necessary for planning a prosthetic treatment with a predictable outcome will be discussed. The dentofacial evaluation will be illustrated as the starting point for the formulation of a sound approach to complex rehabilitations with high esthetic implications. The interaction between esthetic changes and functional consequences will be stressed. The in-depth analysis of several clinical cases will give the opportunity to challenge and demonstrate the application of the systematic method used by the speaker.

TIME	TOPIC
10:00-11:30	Introduction Data collection for comprehensive treatment planning: <ul style="list-style-type: none"><li>• the importance of dental history</li><li>• Occlusal diagnostic categories</li><li>• Esthetic analysis as a starting point for choosing the treatment options</li></ul>
11:30-12:00	<b>BREAK</b>
12:00-13:00	The approach to “complex” clinical cases: <ul style="list-style-type: none"><li>• Mounting of the models on the articulator</li><li>• Ortho-prosthetic evaluation: the 6 guidelines</li><li>• Diagnosis and prognosis</li></ul>
13:00-14:30	<b>LUNCH</b>
14:30-16:00	The thinking mechanism: the 9 questions to pose Clinical example of interdisciplinary treatments with ortho-prosthetic set-up
16:00-16:30	<b>BREAK</b>
16:30-17:30	Interactive discussion of two documented clinical cases

The files with the initial case presentations should be distributed to the people attending the course.
